

Use Case

Title: Developer Installing Augur

Description: In this scenario a user, specifically a developer, wants to install Augur in order to use it for research or some other purpose. To do this the user will walk through the steps outlined in the documentation, which our group will update in order to make them more clear, concise, and up to date with version changes and breaks.

Triggers: A user needs to collect and measure data about open-source software, so they decide to install Augur in order to do so.

Actors: User/Developer, Maintenance team (our group)

Preconditions: documentation site is accessible and up-to-date

Main Success Scenario: The user/developer is able to successfully install Augur without running into any major roadblocks and use it to collect data.

Alternate Success Scenario: The user/developer is able to successfully install Augur.

Failed End Condition: User runs into an error that is not mentioned in the documentation and has to look elsewhere for help on how to move forward with installation.
